free mac qr code

Bing

You can create a QR code on your Mac for free using the following methods:

- **Google Chrome**: You can use Google Chrome to create QR codes on your Mac. Open the website or webpage you want to create a QR code for, click the Share icon in the URL section, and choose the Create QR Code option. Click Download to save the QR code PNG image to your Mac computer .
- **Shortcuts app**: Mac provides a free app called Shortcuts to help users create QR codes on a Mac. Open the Shortcuts app in Finder's Applications folder, click the Plus icon to bring up a window to add a shortcut, input a name in the Shortcut Name for your QR code, search for QR in the search bar, drag and drop the Generate QR Code to the middle, and click the Generate button at the top right corner. Click the eye icon to preview it with the Quick Look app or click the Share icon to share it .
- **Third-party app**: You can also use third-party apps to create QR codes on your Mac .

I hope this helps! Let me know if you have any other questions.
